BRACKET SYSTEMS

POLE UP

BSBS Bracket

Great for new housing, reroofing, or projects where you need complete roof access. The EBR bracket uses surface pressure to push against the underside of the soffit or eaves. Thus meaning no drilling and no patch-ups!

Being able to install this system completely from the ground means the risks associated with working from heights is minimised.

Compliant with the AS/NZS 4994.1 Temporary Edge Protection.

MINIMISE THE RISK OF FALLING FROM HEIGHTS WITH THIS SYSTEM

SURFACE MOUNT

EBCS Bracket

Great for bigger projects where needing to get to the roof edge is not required. This Bracket uses existing fasteners on any roof profile.

This versatile bracket can also be used as a floor mount bracket fastening into concrete, then being used for stairwells, voids, and separating people from hazards.

Compliant with the AS/NZS 4994.1 Temporary Edge Protection.

**GREAT FOR
BIGGER
PROJECTS
& VERY
VERSATILE**

PARAPET CLAMP

EBCP Bracket

This genius piece of engineering clamps onto existing parapet walls or concrete hobs.

Quick to install, this system reduces install time whilst working at height. This bracket is one of the most popular we stock at Edge Protection Hire.

Compliant with the AS/NZS 4994.1 Temporary Edge Protection.

**THE MOST
POPULAR &
QUICK TO
INSTALL**

SLAB CLAMP

EBCP Bracket

This genius piece of engineering clamps onto the edge of concrete slabs.

Quick to install, this system reduces install time whilst working at height. This bracket is one of the most popular we stock at Edge Protection Hire.

Compliant with the AS/NZS 4994.1 Temporary Edge Protection.

**REDUCES INSTALL
TIME WHILST
WORKING AT HEIGHT**

COMMERCIAL BRACKET

Standard Application

The most common use of the commercial bracket is fixing directly into concrete or filled blockwork. This method is ideal for large commercial projects where solid substrates allow for secure fixing and long straight runs.

With spans of up to 5 meters between brackets, this system reduces installation time, minimises holes, and ultimately cuts down on costly patch-ups at the end of the job. It's a straightforward, compliant solution that delivers exactly what's needed. Safe, reliable edge protection. But where this system really becomes powerful is when you introduce the commercial multi-bracket.

**IDEAL FOR
LARGE
COMMERCIAL
PROJECTS FOR
SECURE FIXING**

COMMERCIAL WITH MULTI-BRACKET

Extended Version

The commercial bracket system paired with the multi-bracket extender provides up to 400mm of additional clearance, making it ideal for projects where gutters, services, or structural elements sit proud of the fixing face.

This configuration allows the edge protection to be installed in the correct position without interference, maintaining full compliance while adapting to complex site conditions. Commonly used on commercial builds, it ensures a clean, efficient installation without the need to redesign around obstacles.

**IDEAL FOR
PROJECT WITH
GUTTERS OR
STRUCTURAL
ELEMENTS**

COMMERCIAL WITH MULTI-BRACKET

Purlin

When used in conjunction with purlins, the commercial bracket and multi-bracket system provides a practical solution for roofing and new build projects.

This setup enables full perimeter edge protection to be achieved even when external walls or finished substrates are not yet in place. By fixing directly to the structural steel, it allows roofing works to proceed safely and efficiently, aligning with the construction sequence and reducing delays on site.

**PRACTICAL
SOLUTION FOR
ROOFING & NEW
BUILD PROJECTS**

COMMERCIAL WITH MULTI-BRACKET

Underslung

The underslung application of the commercial bracket with multi-bracket is particularly suited to remedial works and balcony construction.

Installed beneath the slab or structure, this configuration allows for a complete wrap of edge protection while keeping the top surface clear for waterproofing and finishing trades. It is a highly effective solution where maintaining an unobstructed working area is critical, without compromising on safety or compliance.

**IDEAL TO
REMEDIAL
WORKS &
BALCONY
CONSTRUCTIONS**

HANDRAIL POST SYSTEM

This system can be used for both fall protection and void protection.

Used with scaffolding ledgers or tube and fittings this system can span short distances or long runs.

Fixing into rated concrete or timber this system is better suited to large commercials but can also be used on small jobs too.

**FULLY ADJUSTABLE
TO SUIT THE
SMALLEST OR
LARGEST OF JOBS**

WALL MOUNT BRACKET

EBW Wall Mount

The Wall Mount system has been made to fix into to steel wall framing members with or without the cladding in place.

This system is great for large commercial sheds or any steel frame structures for that matter.

**IDEAL BRACKET
FOR LARGE
COMMERCIAL
SHEDS**

UNDER-TILE BRACKET

SMSTB

The under tile-bracket system is a compliant system suitable for tile-to-tile roof replacement or tile roof repair works.

Sitting in the gutter this system allows a full run of the roof and means the tile slide back down over the top to ensure its watertight whilst the system is in place.

**IDEAL BRACKET
FOR TILE ROOF
REPAIRS OR
NEW TILE ROOFS**

TUBE & FITTING

We have an in-depth and strong knowledge of scaffold tube and fitting so we can lean on this knowledge to implement a tube and fitting solution.

This means we can design and implement an edge protection system when a typical bracket may not be practicable.

COMPONENTS

EBC Bracket

EBC Multi Bracket

HC
(half clamp)

PT
(putlog
coupler)

SW
(swivel
coupler)

JNR
(external
joiner)

90DC
(90 degree
coupler)

EBCP

These 3 parts make up the main components of the parapet clamp.

EBCS Surface Mount

Toe Board Mount

T6 grade aluminium tube meeting test requirements under AS/NZS4994.1:2009 Standard.

EBR Bracket

EBRMB
(EBR multi
bracket)

BJACK
(adjustable
base jack)

GEM
(gable end
mount)

ABOUT US

We have over 25 years of combined experience in the scaffolding and labour hire.

OUR BACKGROUND

Our clients range from government bodies and large construction companies through to smaller sub-contractors such as painters, plumbers, lift installers, electricians, roof tilers, and renderers. Alongside these, a large percentage of our customers are homeowners carrying out both minor and major renovations. Due to the growing demand and the change of legislation the natural progression was to add roof edge protection to the list of services we offer. Since we first expanded, we have invested heavily in staff training ensuring our high standards were transferred across and new skills learned and developed. We have also invested heavily in what we believe is one of the best edge rail systems in Australia. Tested to meet the AS/NZS4994.2 the Temporary Edge Protection General Requirements standard the E-Bracket® systems are sure to keep you safe.

OUR AIM

We aim to provide safety solutions to the people of NSW. With our vision, we aim to keep those at high risk safe. We want to ensure everyone goes home as they came.

CAREERS

Edge Protection Hire is always looking for the next generation of safety systems installers. If you have scaffolding or edge rail experience fill in the form and we will get in touch as soon as possible. Full Training will be given to the right candidate with the opportunity to gain nationally recognized government body qualifications.

OUR WAY

There are always right and wrong ways to do things. At Edge Protection Hire, we believe in doing things the right way, the safest way, and the most efficient way.

We make sure each project follows the New South Wales Safe Works Method.

This includes but is not limited to:

1. SITE VISIT

Where reasonably practicable we undertake a site visit before any work is carried out.

2. RISK ASSESSMENT

After conducting a site visit, we complete a full risk assessment before any work goes ahead to ensure people, the environment, and equipment is not put at risk.

3. SAFE WORK METHOD STATEMENT

As part of the risk assessment, we complete S.W.M.S. These are site-specific and each installation team and site team sign up to these to ensure they understand the methods and procedures before starting any work on site.

4. TOOLBOX TALK & EMERGENCY PLAN

On arrival at the site, our team supervisor conducts toolbox talks on the morning of the installation after the team has read through the S.W.M.S. In the toolbox talk, they outline the emergency plan and what hazards to look out for amongst other key information.

5. INSTALLATION

Only after all these prior steps have been completed do we start the installation.

6. HANDOVER CERTIFICATE

After the installation is complete and we are happy that it is fully compliant with the AS/NZS4994.2 standard do we then sign off the edge rail system and issue the handover certificate.

7. REMOVAL & CLEAN-UP

We then ensure no waste is left on site. The hire of the edge rail then starts until we are called back for the removal.

PROUD MEMBERS OF WAHA

Edge Protection Hire is proud to be a member of the Working at Height Association (WAHA), Australia's leading industry body dedicated to the prevention of falls from height and the promotion of safe working practices.

WAHA brings together industry experts, manufacturers, installers, and safety professionals to improve standards, influence legislation, and provide guidance on best practice when working at height. As a member, we are aligned with a national network committed to raising safety standards across construction, maintenance, and industrial sectors.

Our membership reinforces our commitment to:

- Delivering compliant and reliable edge protection solutions
- Staying informed on the latest Australian Standards and safety regulations
- Supporting industry-wide improvements in height safety practices
- Providing our clients with solutions that prioritise safety, quality, and performance

At Edge Protection Hire, safety is not just a requirement it's a responsibility. Our involvement with WAHA ensures we remain at the forefront of industry developments and continue to deliver systems that help protect workers on every project.

TESTIMONIALS

“I have had the pleasure of working with for several years now. Recently, I had the opportunity to engage their services for edge protection on a school building roof, and I was thoroughly impressed with the quality of their work.

From the outset, the team demonstrated a high level of professionalism, attention to detail, and commitment to safety. Their team arrived on time, were courteous and respectful, and worked efficiently to install the edge protection system. I was particularly impressed with their ability to complete the project within the agreed-upon timeframe and budget, without compromising on the quality of their work.

STEPHEN DEASY, FULL SPEC GROUP

“Over the past several years, we’ve had the pleasure of engaging Stronghold Hire and Edge Protection Hire across multiple projects—and their service has been consistently outstanding. Craig, Felix, and the team have proven time and again that they’re reliable, responsive, and aligned with the high standards we demand on every job site.

Their support across both scaffolding and edge protection has been seamless. They understand the pace and pressure of commercial projects and always deliver with precision and care. Whether it’s short lead times or complex site logistics, they show up with solutions—not excuses.”

BEN GOODWIN DIRECTOR, GOODWIN BROTHERS

PROUD TO PARTNER WITH:

As well as the companies listed below we also work with the NSW Government, schools, court houses and hospitals along with our residential clients.
